

Press Release

ABB Process Solutions release new website dedicated to spreadsheet validation.

ABB Process Solutions and Wimmer Systems are very excited to announce the release of a new website dedicated to spreadsheet validation.

Visit www.spreadsheetvalidation.com

The website release has coincided with the release of the new version of DaCS™ from Wimmer Systems.

DaCS™ is the worlds leading software solution for providing the technical controls required to validate Excel spreadsheets and to comply with 21 CFR Part 11 and Sarbanes-Oxley.

The software provides a secure environment for Excel spreadsheets with full security, audit trails, and data integrity checking. The new version provides increased flexibility, including the ability to interface Excel and Excel data with other systems (e.g. MRP, LIMS, CDS and instrumentation).

The website provides you with everything you need to know about controlled use of spreadsheets in your regulated environment. It will also act as the source for DaCS™ support via the on-line knowledge base and ABB Process Solutions helpdesk.

David Harrison, leading consultant to the pharmaceutical industry says:-

"We recognized that the majority of companies need support and information on the best ways to validate spreadsheets. Spreadsheetvalidation.com provides a convenient location to house that information. The site will include a variety of articles and presentations from industry experts on this topic, and act as a source of information from leading vendors, end users, and other interested groups on this important topic".

To contribute to www.spreadsheetvalidation.com please contact us via the website or email us at wimmer.systems@gb.abb.com.
